

LEANDRO FABIAN ZENTENO SOLIZ

Junior Cloud Engineer | Junior DevOps Engineer

Cochabamba, Bolivia (UTC-4) | Open to Remote, International

leandrozentenosoliz16@gmail.com | github.com/Leanzont | linkedin.com/in/leandrozentenosoliz

SUMMARY

Junior Cloud Engineer with hands-on experience designing and deploying AWS infrastructure using Terraform, Docker, and CI/CD pipelines. Builds scalable, multi-tier cloud environments (multi-AZ VPCs, Application Load Balancers, RDS, containerized applications) and automates operations with Python and GitHub Actions. Self-motivated, with strong documentation habits and written English communication skills. Currently pursuing AWS Solutions Architect Associate (SAA-C03) certification. Seeking a remote Junior Cloud/DevOps Engineer role with an international team.

TECHNICAL SKILLS

Cloud (AWS): EC2, S3, RDS, VPC, ALB, IAM, Route 53

Infrastructure as Code: Terraform (modules, remote state, workspaces, CI/CD integration)

Containers: Docker (Dockerfile, Docker Compose, multi-stage builds, container networking)

Orchestration: Kubernetes (pods, deployments, services, ConfigMaps)

Programming: Python (boto3, scripting, CLI tools, REST APIs), Bash

CI/CD: GitHub Actions (workflows, secrets management, automated pipelines)

Operating Systems: Linux (Arch Linux daily driver, system administration)

Networking: TCP/IP, DNS, subnets, load balancing, security groups

Tools: Git, GitHub, VS Code

PROJECTS

TechFlow Cloud Toolkit | *End-to-end AWS infrastructure project*

github.com/Leanzont/techflow-cloud-toolkit

- Designed a multi-AZ VPC with an Application Load Balancer, EC2 instances running Docker, and a private-subnet RDS PostgreSQL database
- Provisioned S3 buckets for logs and backups, plus IAM roles and policies following least-privilege principles
- Built reusable Terraform modules with S3 remote state backend and state locking
- Developed a Dockerized Flask API with 3 endpoints (/health, POST /data, GET /data)
- Developed a Python drift detector comparing expected infrastructure state (YAML) against live AWS resources
- Implemented CI/CD with GitHub Actions covering terraform fmt/validate/plan and Docker build/push

Terraform AWS Labs | *10 progressive hands-on infrastructure labs*

github.com/Leanzont/terraform-aws-labs

- Completed 10 progressive labs advancing from a single EC2 instance to modular infrastructure with remote state and CI/CD
- Covered core AWS building blocks: VPC, subnets, IAM, RDS, S3, ALB, and GitHub Actions integration

Python Projects & Scripts | *AWS automation and CLI tooling*

github.com/Leanzont/Python-projects-scripts

- Built AWS automation scripts using boto3 for common cloud operations tasks
- Developed command-line tools with argparse for repeatable workflows
- Implemented REST API consumption, file handling, and networking utilities in Python

EXPERIENCE

Self-Directed Cloud Engineering Study

January 2026 – Present

- Built scalable cloud infrastructure on AWS using Terraform, including multi-AZ networking, load balancing, and managed databases
- Automated infrastructure and application deployments end-to-end with GitHub Actions CI/CD pipelines
- Developed Python tools for cloud operations, automation, and infrastructure security auditing
- Performed daily Linux system administration on Arch Linux, managing services, networking, and environment configuration

EDUCATION & CERTIFICATIONS

- AWS Certified Solutions Architect - Associate (SAA-C03) | In Progress, expected December 2026
- Self-taught Cloud & DevOps Engineering | hands-on labs, official AWS documentation, and industry courses
